

Thermal bridge-free window and door fixation in sandwich elements

PHILIPPGROUP

Our easy solution for a quick fixing of windows and doors in the insulation layer of concrete sandwich panels. The U-shaped FT Anchor is made of a glass fibre reinforced plastic that does not cause any thermal bridge within the construction. Its simple shape ensures a secure hold in the concrete on the one hand and eases the installation of opening elements on the other. Furthermore, the boreholes and the angular shape create a bearing profile to which window and door elements can be fixed effortlessly using standard self-tapping screws.

- Easy handling already during the production process of sandwich elements
- Time saving installation of opening elements at job-site
- Effortless fixing of windows and doors
- No thermal bridges
